

Issues Identified in the Original Starter Code

When I reviewed the starter code, I found the following problems that need to be fixed.

HTML Errors:

- The HTML pages do not have a language (lang) set.
- Character encoding (meta charset) is missing.
- The viewport meta tag is missing.
- The Home page has no navigation menu.
- The About page has no navigation menu.
- The Projects page has no navigation menu.
- The Contact page has no navigation menu.
- The pages used `<div>` for the header instead of `<header>`.
- The pages do not use a proper `<nav>` element.
- The main page content is not inside `<main>`.
- Content sections used `<div>` instead of semantic `<section>` or `<article>` elements.
- The footer used `<div>` instead of `<footer>`.
- The Home page image has no alt text.
- The About page image has no alt text.
- Project 1's image has no alt text.
- Project 2's image has no alt text.
- The About page is missing the required skills table.
- The Projects page is missing a third project.
- Contact form fields does not have labels.
- The email field incorrectly used `type="text"`.
- The form does not have enough different input types.
- The form has no dropdown/select field.
- The form has no radio button or checkbox.
- The form does not use HTML validation such as `required`, `minlength` or `pattern`.
- The form is not fully accessible because the controls were not properly connected to labels.

CSS Errors:

- The header does not have proper alignment.
- Navigation styling is completely missing.
- Navigation hover styling is missing.
- Keyboard focus styling is missing.
- The hero section has a colour-contrast problem.
- Image sizing needs improvement.
- There is not enough different CSS selector types.
- Pseudo-class selectors such as :hover are missing.
- Combination or descendant selectors are not properly demonstrated.
- Form styling is incomplete.
- The CSS does not demonstrate enough margin, padding and border properties.
- Block and inline element styling is missing.
- There is not enough variety in text and colour styling.
- Table styling is completely missing.
- The footer is incorrectly aligned to the left.
- The CSS has code-quality problems such as poor organisation, inconsistent spacing and not enough useful comments.

How I Planned to Fix Them

I planned to work through the website one page at a time. I would first fix the HTML structure, navigation, images, table, projects and contact form. After that, I would improve the CSS by fixing the layout, spacing, colours, navigation, form, table and accessibility styles. Finally, I would test all four pages to make sure the links worked and the website looked consistent.
